Program 3

Assume that there are 3 floors and 4 rooms in each floor. Design the vacuum cleaner to ensure the rooms are clean. You may make suitable assumption for initial state.

Program:

```
# Given M x N grid(floor) create an agent that moves around the grid until the entire grid is clean
floor = [[1, 0, 0, 0], # '1' represents dirty and '0' represents clean
        [0, 1, 0, 1],
         [1, 0, 1, 1]]
def clean(floor):
  m = len(floor[0]) # no of cols
   n = len(floor) # no of rows
   no\_of\_tiles = m * n
   tiles_checked = 0
   row = 0
   col = 0
   while tiles_checked < no_of_tiles:</pre>
       # Current position
       print_floor(floor, row, col)
       # Suck if dirty
       if floor[row][col] == 1:
           floor[row][col] = 0
           print('Sucked the dirt')
       else:
           print('Already Clean')
       # Next tile
       if row % 2 == 0:
                                 # Even rows the bot moves right to the next tile
           if col < m-1:
               col += 1
                row += 1 # Move to next row if we reached the last col
       elif row % 2 == 1:
                                 # Odd rows the bot moves left to the next tile
           if 0 < col:
               col -= 1
           else:
               row += 1 # Move to next row if we reached the last col
         tiles_checked += 1
         print('-----
     print('Cleaned!!!')
 def print_floor(floor, row, col):
    temp = floor[row][col]
    floor[row][col] = 'VC'
     for x in floor:
        print(x)
     floor[row][col] = temp
 # Call the function
 clean(floor)
```

Output:

```
['VC', 0, 0, 0]
[0, 1, 0, 1]
